Noida , Uttar Pradesh , India

PROFESSIONAL SUMMARY

Python-focused software developer with hands-on experience in backend development, AI/LLM-based code analysis, REST APIs, data processing, databases, and modern development tools. Experienced in building practical applications including a Smart Code Reviewer and an Art Portfolio application.

CORE SKILLS

- **Programming Languages:** [Python](#), Java, SQL, JavaScript, DSA
- **Frameworks & Libraries:** React, Next.js, Angular, Node.js, Flask, FastAPI, Django, Spring Boot, ASP.NET
- **Tools & Platforms:** [GitHub](#), Git, Docker, Pip, Venv, REST API, Pandas, NumPy
- **Databases:** PostgreSQL, MySQL, CRUD, Joins, Indexing, Normalisation
- **Soft Skills:** Communication, Critical Thinking, Adaptability, Decision Making, Time Management, Problem Solving, Leadership, Stakeholder Management
- **Languages:** English, Hindi

EDUCATION

IEC College of Engineering and Technology | [Greater Noida](#)
B.Tech - Computer Science and Engineering
([Information Technology](#))

Sep 2023 - Feb 2027
CGPA: 8.7

Pursuing B.Tech in Computer Science and Engineering with a strong focus on Python programming, Object-Oriented Programming, Data Structures and Algorithms, Database Management Systems, Artificial Intelligence, Machine Learning, and Software Development, Developing practical experience .

WORK EXPERIENCE

Trainee | [Trainee](#)
JPMorgan Chase & Co.

Jun 2026 - Jun 2026

- Engineered a Smart Code Reviewer using Python, REST APIs, AI/LLM-based code analysis, and automated code review techniques to analyze source code and generate actionable feedback.
- Applied database management concepts for structured and document-based data storage, retrieval, and organization.

PROJECTS

Smart Code Reviewer

Jul 2026 - Jul 2026

- Developed a Smart Code Reviewer to address challenges in software development, particularly the time-consuming and inconsistent nature of manual code reviews for large codebases. The system analyzes source code, identifies potential errors, [code-quality issues](#), security vulnerabilities, and opportunities for improvement, providing [contextual recommendations](#).
- Integrated semantic/vector search to retrieve relevant coding patterns and contextual information, enabling developers to receive more accurate and actionable feedback. This solution aims to reduce code-review effort, improve code quality, [support faster debugging](#), and assist developers in maintaining reliable and maintainable software.
